

BETA ALANINE

Increases endurance and delay fatigue

Increases endurance and performance

Speeds recovery

Food supplement made of Beta-Alanine, nonessential amino acid, one of the special position of the amino group, effective ergogenic supplement, increasing muscle strength and antioxidante marked effect.

How the Beta-Alanine works:

- Beta-Alanine is an amino acid involved directly with increasing carnosine, dipeptide found in muscle and brain, whose release in the body results in an increased resistance, improved muscle contraction and a delay fatigue.
- Prevents muscle hyper acidity, inhibiting the production of lactic acid, thus increasing performance capacity.
- Good regulator of calcium, induces rapid release of calcium, improving muscle contraction, and increasing training time.
- Reduces oxidative stress, getting increased output and accelerating muscle recovery.
